

Dr. Kondrot Delta Laser Eye Protocol.

These protocols should be done under the supervision of an eye doctor. If you have glaucoma you need to have your pressure checked to make certain that there is no increase in intra ocular pressure. By continuing reading this protocol you agree to have these treatments performed under the supervision of your eye doctor

1) Direct stimulation of the eye.

Make certain that your eyelids remained closed during the entire procedure. Keep the laser in one position and do not move the device during treatment.

- 50 HZ
- 2 minutes per eye
- Ultrasound on.

2) Stimulation of the lymphatic system and carotid Artery.

Make certain that you do not rub or put pressure on your neck. Hold the laser in one position.

- 5 HZ
- 2 minutes over carotid
- Ultrasound on.

3) Stimulation of stem cells over the long bones of the lower legs and the sternum.

Hold the laser in one position.

- 5 HZ
- 1 minutes over the bone
- Ultrasound on

Over long bone of lower

Over sternum
